# Evergreen CLASSICS

TIMELESS SELECTION OF PENS, WHICH HAVE NOT LOST ANY OF THEIR CHARM AND POPULARITY FOR MORE THAN 10 YEARS

A CHARITY PROJECT OF GABRIELIS FOUNDATION

THE PEN, THAT HELPS

# SAVE THE NATURE

WE USE MORE ENVIRONMENTALLY FRIENDLY ALTERNATIVES TO TRADITIONALLY USED MATERIALS

## RENEWABLE MATERIALS BIODEGRADABLE AND NATURAL MATERIALS

### CORK

It is the bark of a long-lived cork oak that is peeled from the tree and the tree will form a new one in time. The bark obtained in this way is used for the production, in our case the surface of the KORKIN notepad and the KORK pen.

### CORN PLA

Corn PLA is a natural plastic substitute, made from the starch of a fermented plant. It is an ecological resource and a biodegradable alternative to petroleum products.

### WOOD

Wood is one of the oldest used natural raw materials. No waste is generated during wood processing, on the contrary, smaller parts are suitable for the production of crayons, graphite pencils and the clip of NUKAK pen. Wooden products have a long life and they are natural and pleasant to use.

### BAMBOO

Evergreen, the fastest growing plant with low water and fertilizer requirements. It is very flexible and naturally antibacterial, its products are unique in their natural structure and the possibility of combination with other materials. Choose from a selection of bamboo pens and sets RIVET, TURAL, BORGO, LESNA and NUKAK, the BAMBOO block and the RIGHE rulers. This year's bamboo novelties are the SEANI pens, BORGO STRAW, the alternative "endless" pencil ALUMI and the notebook LORETO.

## COMPOSITE MATERIALS

REDUCE THE USE OF PLASTIC BY ADDING NATURAL INGREDIENTS

### COFFE GROUNDS

Recycling coffee grounds and waste in coffee production is also a variant of waste recycle. The mass obtained is added to the mixture with plastic in a ratio of 40:60 and a unique structure of the material is created, which is also used for the COFFI ballpoint pen.

*save the nature*

### LIMESTONE

the material is made of 45% ground limestone and 55% plastic. This creates an interesting durable material, which you will find on the unique pen MINERA.

### WHEAT STRAW

Straw stalk is a by-product of growing grain. The combination of ABS or PP plastic and up to 60% of crushed straw fibers creates a lighter material with similarly usable properties as waste material for production. MALA, AVENA, VENDI pens and accessories of CARTI pens are made of straw. The novelties of this year's catalog are the BORGIO STRAW and AGIO pens, the "green" variant of the popular REPUBLICA pens.

### BAMBOO FIBER

It is used similarly to straw, the waste from the production of bamboo products is crushed and added to the mixture with PP or ABS plastic. The new FIBER is made of this composite material.

## RECYCLED MATERIALS

THEY ARE CREATED BY PROCESSING ALREADY USED MATERIALS

### RECYCLED PAPER

In the production of recycled paper, already sorted used paper and a part of new pulp from waste wood are processed. You can find recycled paper on the bodies of VIRON METALIC and CARTI pens in addition to notebook covers and other packaging. Pen PERTI, which is fully made of paper, is one of the novelties of this year.

### RECYCLED LEATHER

Recycled leather is produced by grinding residues in the production of leather and cuttings from the production of leather products. This mass is combined with a latex mixture and further rolled and pressed. The MARES pen and CASTEL set are covered with this "new" recycled leather.

### RPET

PET is the most common material for the production of disposable beverage bottles. By reprocessing that material, recycled RPET is produced, which has inspired the design of the BOTTLI pen.

# ERASE

## Erasable Ballpen

**DO YOU KNOW THAT WITH "ERASE PEN" YOU CAN CREATE WONDERS?**

**OUR TIP:**

Excellent gift for fun people – Send invisible messages! Write a message, erase it and send the empty paper to your friend. Then your friend can read your message after keeping the paper in the freezer for a while...

**DO YOU KNOW HOW IT WORKS?**

The ink disappears as it warms up. It can be done easily with mechanical friction or an iron (approx. 60 degrees). After cooling the erased ink appears again (approx. -15 degrees).

# STEP BY STEP THROUGH THE PRINT ORDER

# PRINT TECHNOLOGIES

## UV PRINT

UV1 | UV1 | UVS

UV print is perfect for a full color print of promotional products. Ballpoint pens and boxes suitable for UV print are marked accordingly with a symbol.

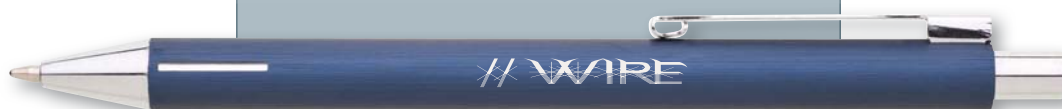

## PAD PRINT

T1 | T2 | T3

Pad printing is one of the most frequently used labeling methods. The logo is burned onto a polymer plate, called the "cliché", which is then developed. The paint is transferred from the "cliché" to a silicon based pad, which is then used to print the object. Due to the flexibility of the silicon pad, slightly curved, cylindrical surfaces can be printed on as well. The symbols next to the items indicate what color fit the best for that particular item.

## LASER ENGRAVING

L | L2

Laser engraving is a procedure ideal to burn a pattern onto a metallic material. The laser beam is precise even in the smallest details of a logo. The color of engraving depends on the material of the background surface. In the catalogue the final colors are listed in text next to every ballpoint pen.

## MAGIC LASER

L<sup>+</sup>

Laser marking using combinations of specific features of the surface materials that reveal the unique effect of the underlying layer. In the catalogue is the magic laser/mirror effect laser noted in text.

## EPOXY LOGO

epoxy

The logo is printed in color (CMYK) on a sticker, which is then covered by a see-through synthetic resin that creates a 3D effect on the surface. Templates are available for a range of our pens that can be labeled with this technology, to ensure the best visibility of your logo. The models suitable for doming are marked with a symbol.

Marking positions are listed as LETTERS in the text.  
You can find the most common places and maximum sizes in technical pictures.
